

# OVERSITE INSTALL MANIFOLD CABINET

PRODUCT OVERVIEW

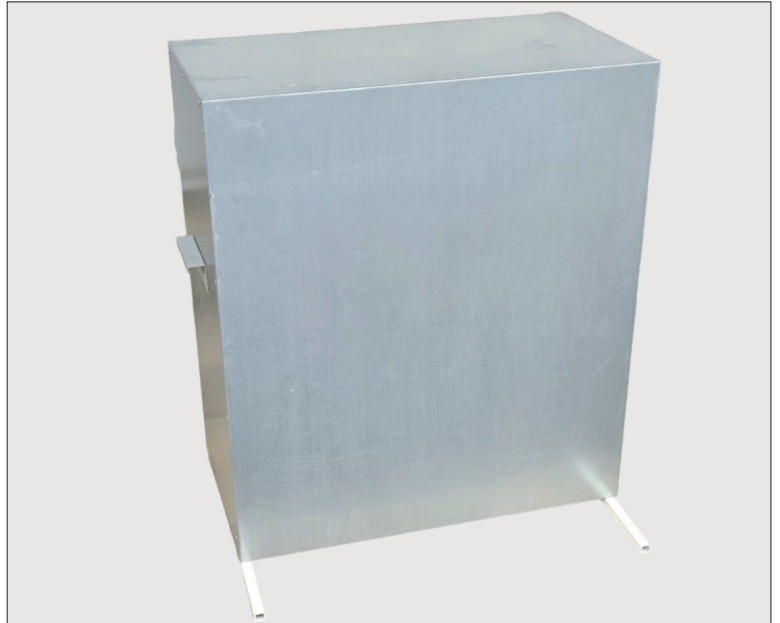

Permanent manifold stand

Re-usable manifold cover

Assembled complete unit

These temporary manifold protection cabinets are supplied complete, made up and finished in galvanised steel. They are intended for temporary use only either until you have finished your superstructure or through the complete duration of the build. They are designed to be slightly larger than the manifold stand and will give full protection against any potential damage from falling bricks, tiles, or other debris during construction. Please note these are not weatherproof. The permanent manifold stands are supplied fully made up and prefinished in white enamel lacquer finish.

The manifold is secured onto this board with self-tapping screws and will give a very strong, permanent location. The back board is strengthened and help up with 20mm box section. The upside-down T section sits on top of the insulation for the subfloor (either PIR on top of block and beam or 80mm overlay for Jet floor type systems) which locates the manifold during underfloor heating install and until the floor screeding is completed. Once the screeding has been done the board is securely fixed in and cannot be moved.

Stand Only		
Width (mm)	Height (mm)	Depth (mm)
760	850	20 + Legs (can be cut to suit)
Comple Unit		
Width (mm)	Height (mm)	Depth (mm)
